

# SIMT U.S. Managed Volatility Fund

Fact Sheet / March 31, 2024

## Investment Strategy

The U.S. Managed Volatility Fund, (the "Fund") seeks capital appreciation with lower volatility than the broad U.S. equity market. The Fund will typically invest in securities of U.S. companies of all capitalization ranges that exhibit low relative volatility. Over the long-term, the Fund is expected to achieve a return similar to that of the Russell 3000 Index with a lower level of volatility. Because the Fund's primary objective is to manage absolute volatility, sector and market-cap exposures may differ substantially from the index, which can cause short-term performance to diverge significantly from the broader market.

## Investment Philosophy and Process

The Fund uses a multi-manager approach to portfolio construction that seeks to generate excess returns (i.e., returns in excess of benchmark) and at the same time provide diversification by avoiding over-concentration in a single investment style, sector or market trend. Our analysis seeks to identify each manager's competitive advantage and characteristics of that advantage that can be monitored on an ongoing basis. Asset allocation to a given manager is based on the manager's skill set, the current macro economic environment, and the risks inherent in each manager's strategy.

## Fund Details

Total Net Assets	\$673.32 Million
Share Class	Class Y
Ticker	SUSYX
CUSIP	78413L787
Inception Date	October 28, 2004

**Risk Information**

There are risks involved with investing including loss of principal. There is no assurance that the objectives of any strategy or fund will be achieved or will be successful. No investment strategy, including diversification, can protect against market risk or loss.

In addition to the normal risks associated with investing, international investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from social, economic or political instability in other nations. Investments in smaller companies typically exhibit higher volatility.

**Glossary and Important Information**

**Beta:** Quantitative measure of the Fund's volatility relative to the benchmark used. A beta above 1 indicates the fund is more volatile than the overall market, while a beta below 1 indicates the fund is less volatile.

**Price to Book Ratio:** The most recent price of a security divided by the company's annual fiscal year basis book value per share. Preliminary book value per share figures are used when available otherwise the book value per share is from the most recent fully reported financials. When the denominator is negative, the output is suppressed.

**Price to earnings ratio:** The most recent price of a security divided by the company's annual fiscal year basis earnings per share. Preliminary earnings per share values are used when available otherwise the earnings per share is from the most recent fully reported financials. When the denominator is negative, the output is suppressed.

**Standard Deviation (Absolute):** Used to describe historical volatility, a statistical measure of the distance a quantity is likely to lie from its average value. It is applied to the annual rate of return of an investment, to measure the investment's volatility (risk). Standard Deviation is synonymous with volatility, in that the greater the standard deviation the more volatile an investment's return will be. A standard deviation of zero would mean an investment has a return rate that never varies.

**Tracking error:** The measure of the risk of the portfolio relative to the benchmark.

**Weighted Capitalization:** The market price of an entire company, calculated by multiplying the number of shares outstanding by the price per share.

For those SEI products which employ a multi-manager structure, SIMC is responsible for overseeing the sub-advisers and recommending their hiring, termination, and replacement. SEI Investments Management Corporation (SIMC) is the adviser to the SEI Funds, which are distributed by SEI Investments Distribution Co. (SIDCO). SIMC and SIDCO are wholly owned subsidiaries of SEI Investments Company.

The Russell 3000 Index measures the performance of the largest 3000 U.S. companies representing approximately 98% of the investable U.S. equity market.
